The Public Sewers.

"Since their establishment on a large scale as we have them now the public sewers have in spite of all their advantages, not ceased to be a source of anxiety," said Architect-Professor Fava last night to his hearers, on "Sanitary Engineering," at the Columbian University. After having given a short sketch of their development he laid down the points which form the immediate danger to cities, such as their open discharge of gases into the streets, their lability to permeate the surrounding ground if they are not water-tight, and their direct connection with the dwellings, and went on to describe the means of relief. This important subject will be continued next Wednesday.
